GROUP SCHUMACHER

Generation L

Climate change and narrowing harvest time windows are imposing ever greater demands on machine capacities and their reliability of operation.

This poses new challenges for farmers and contractors in terms of hardware investments and running costs, as headers increase in width and the cutting system is exposed to higher wear.

Generation L is the SCHUMACHER response. Our enhanced ASL and CML grain lifters are our answer to requests from users for maximum service life and minimum harvest losses.

WaveTrack

**The wave-shaped skid
of the ASL and CML lifters
ensures an
extended service life.**

Longer service life

WaveTrack skid

Heavier headers and higher driving speeds subject the grain lifters to higher friction and abrasion, with negative implications for durability. For optimum reliability, the ASL and CML grain lifters have been given the WaveTrack base.

The wavy design means there is more material in the gliding zone which increases its resistance to wear.

Depending on harvest conditions, a WaveTrack skid can offer a 20% longer service life on average.

Right: intact WaveTrack skid

GENERATION L

Maximize your yields with ASL

Raised and kinked SlimProfile

Higher yields and new, short-stemmed grain varieties with low-hanging ears can lead to losses on the cutter bar.

The grain lifters of the ASL generation stand out with their SlimProfile which is engineered at a steeper angle and has a kinked end. This new design lifts the stems sufficiently high and above the sections yet without hampering the reel. This maximizes your yields.

A traditional grain lifter with a regular profile:
The ears are not lifted high enough.

The new ASL grain lifter with raised lifter profile:
The ears are effectively guided into the header

Order from your local farm machinery dealer.

The new ASL supersedes the existing standard ASK grain lifter but is compatible with all previous models.

ORIGINAL

Boost your harvest yields

Why use grain lifters?

- Lifters reduce the overall machine wear as they prevent soil ingress into the machine when cutting close to the ground
- Lifters reduce losses in down crops, in short-stemmed cereal varieties and low-hanging ears and pods
- Lifters significantly enhance crop intake and threshing results by optimizing the material flow
- Lifters boost the header control

Models

| Existing models | Existing ID No. | New models | New ID No. |
|-----------------|-----------------|------------|------------|
| ASK-100 | 16445 | ASL-100 | A013E |
| ASK-120 | 16587 | ASL-120 | A013F |
| ASK-121 | 16588 | ASL-121 | A013G |
| ASK-127 | 16589 | ASL-127 | A013H |
| CM-300 | 10181 | CML-300 | A013J |
| CM-400 | 10175 | CML-400 | A013I |

ASK grain lifters are replaced by the ASL series.
CM grain lifters are replaced by the CML series.

CML grain lifter

The CML lifter is available in two different designs.

CML-300: Regular cut

CML-400: Low cut

The new CML supersedes the existing CM grain lifter but is compatible with all previous models.

Order from your local farm machinery dealer.

Simply good.
