ARISTA CROP LIFTER

ARISTA

The perfect solution for any harvest situation

Farm machines are evolving into high-technology and high-performance machines that process huge amounts of material at high rates.

This type of equipment requires flexible and universal components that allow operators to save time, boost efficiencies and reduce strain and stress. The SCH ARISTA crop lifter offers just that. Providing extremely easy attachment and removal, the special QuickFit System is the perfect solution for a multitude of harvest situations.

Flexible use

ARISTA – the universal solution for your header

Flex headers stand out for an excellent adaption to the ground contours. For the cutter bar to flex horizontally, precision control and guidance must be provided by so-called skid shoes. These, however, make it often difficult to attach a regular crop lifter to the bottom of the guard. This is where the innovative ARISTA crop lifter comes in as a solution.

All attachment elements of ARISTA are arranged on top of the guard – a solution that prevents trash and soil from building up under the cutting system. This novel design increases the clear space between the ground and the cutter bar and creates an exceptional flexibility to master multiple harvest situations and crops. The ARISTA crop lifter suits rigid headers as well as flex headers in rigid mode.

The lifter attaches to the top of the SCHUMACHER guard.

ARISTA

Maximum time savings

ARISTA - the world's fastest-fit crop lifter

The new QuickFit solution makes attachment and removal of this lifter extremely easy and fast. Not only does the quick-fit mechanism stand out for its ergonomic design and attachment without tools, it also offers an integral height setting mechanism that adjusts the lifter to one of two height positions for adaptation to the current cutting angle. The new ARISTA crop lifters are designed for attachment to all Schumacher guards of any length.

Operators appreciate QuickFit for its single-handed attachment without tools – a well-designed solution that offers extremely easy and intuitive operation. At the same time, it makes swapping crop lifters and adapting to varying harvest situations a fast and user-friendly operation.
