**MAXIMUM HARVEST TIME.
MINIMAL DOWNTIME.**

When Every Minute Counts.

The new EasyCut 3 QuickFit® Cutting System

Short harvest windows, difficult conditions, and unpredictable collisions with foreign objects: If a knife section or guard needs to be replaced during harvest, every minute counts. Our new EasyCut 3 cutting system with QuickFit® technology takes efficiency and comfort to the next level on your way to the perfect harvest.

EasyCut3
QuickFit®

3x faster replacement

With the new QuickFit[R] system the guard as well as the knife section can be replaced in a fraction of the time it used to take. Thanks to their innovative design, simply loosen the nuts and pull the components out.

No loose parts

The nuts are only loosened, not removed completely. No parts can fall off and get lost.

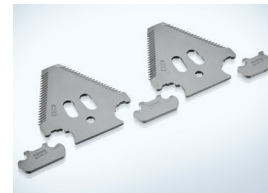

Only one tool required

As the fastening nuts for the guards and knife sections are located exclusively on the top side, only one tool is required. No need to hold or brace from below.

QuickFit® GUARD

The new V-design extends the effective cutting edge by 10% and increases the bending stiffness by 50%.

QuickFit® KNIFE SECTION

The new design of the knife section allows the direct transmission of tensile forces.

EasyCut 3 KNIFE HEAD

By eliminating the previous top bar, the weight of the knife head is reduced by 30%. Thanks to the circular weld seam design, it achieves up to 300% higher tensile strength.

EasyCut 3 ROLLER GUIDE

The key improvement lies in the protected position of the new roller guide holder, which is optimized for crop flow.
